

ARE YOU LOOKING FOR AN INDEPENDENT ENTITY?

Health Equity Impact Assessment (HEIA)

We work with Hospitals, Skilled Nursing Facilities, Diagnostic and Treatment Centers, Surgery Centers, and more.

Our work will incorporate a five-step approach:

1.  **FULL SCOPING OF THE CERTIFICATE OF NEED (CON) PROJECT'S AFFECTED POPULATION**

This activity includes defining the primary market area (PMA) for the facility and detailing by ZIP Code the geographic service area.

2.  **IDENTIFYING POTENTIAL HEALTHCARE DELIVERY IMPACTS**

For this step, RMS works with the Applicant to identify both the positive and negative health impacts the proposed Certificate of Need (CON) project could have on the targeted population; particularly the medically underserved population.

3.  **IDENTIFY FACILITY'S MITIGATION STRATEGIES**

This scope of work will focus on fostering effective communication about the intended plan and identify strategies to mitigate any/all negative impacts of the overall project and intended plan.

4.  **MONITORING AND MEASURING THE EFFECTIVENESS OF THE MITIGATION STRATEGY(IES)**

This work will involve documenting the facility's key mitigation strategies as well as detailing key performance indicators that can measure success of these strategies.

5.  **SUMMARIZE HEIA RESULTS & SHARE RECOMMENDATIONS**

The RMS assessment work will include a summary report of the project's HEIA findings as well as a list of suggestions from RMS that will help address equity issues.

Why RMS?

- Experienced
- Located in New York State
- Analytics Team
- Dedicated Healthcare Team
- Proven Track Record
